

## Eligible Projects specification

This is a specification linked to Gothenburg's green bond framework dated march 2015.

- Renewable Energy (solar, wind, wave, bio, waste and hydro).
- Energy Efficiency
  - At least 25% reduction.
- Waste Management
  - Measures that promotes reduction of waste, increased recycling and circular economy.
- Water Management
  - Water infrastructure, wastewater management and water purification that leads to increased resource efficiency and/or climate adaption.
- Bio Fuel
  - Production of bio fuels (in particular biogas) and infrastructure to support distribution of bio fuel.
- Smart grids
  - Measures that promote renewable energy or energy efficiency
- Sustainable transportation (e.g. public transport, cycle and shipping infrastructure)
  - Measures to promote use of fuel with low carbon footprint
  - Biking and biking infrastructure
  - Pedestrian and pedestrian infrastructure
  - Sustainable shipping – measures that substantially decreases the use of fossil fuels
  - Sustainable freight - measures that substantially decreases the use of fossil fuels (eg. Reloading to railway and city delivery by bike)
  - Public transportation – tram, buss, ferry, cableway. Fuel and techniques with low carbon footprint.
- Sustainable housing (e.g. infrastructure and construction)
  - Adaptation measures to make the city more resilient.
  - Green buildings:
    - New construction max 60 kWh/sqm, year for apartments and max 50 kWh/sqm, year for properties. A certification by Svanen, Miljöbyggnad Silver or other equivalent is good but not mandatory.
    - Major renovation a reduction of at least 40% or max 80 kWh/sqm, year for properties and a reduction of at least 40% or max 90 kWh/sqm, year for apartments.
    - Other measures: at least a 25% reduction.
- Environmental (max 20%)
  - Biodiversity (e.g. development of new or restoration of nature conservation areas)
  - Water clearing facilities
  - Air pollution
  - Chemicals (eg. non-toxic preschool)
